PROFESSIONAL EXPERIENCE

Senior Web Developer Aug 2026 – Present
Independent Contractor

- Built full-stack web applications for healthcare and staffing clients — a plagiarism checker, an email marketing system, and an HRIS platform — using Next.js with AI-assisted development, deployed on Vercel and Supabase.
- Structured content for retrieval and citation by AI answer engines (ChatGPT, Perplexity, Google AI Overviews) with entity-based SEO, Q&A formatting, and schema markup; built AI system prompts for SEO advisory and content-enhancement workflows.
- Executed technical and on-page SEO — keyword research, competitor analysis, content gap analysis, and structured blog expansion — tracked through Google Search Console and GA4.
- Built and optimized GoHighLevel CRM workflows: configured automations, resolved duplicate-trigger issues, and troubleshot batch email campaigns to improve deliverability and reliability.
- Diagnosed and resolved email quarantine issues caused by self-addressed mail patterns in CRM workflows (Proofpoint / GoDaddy Advanced Email Security); managed mailbox provisioning and sender configuration to restore reliable delivery.
- Administered DNS across split GoDaddy/GHL infrastructure — domain transfers, record configuration, and verification of mail and traffic routing.
- Delivered full website builds on GoHighLevel and WordPress/Elementor, including custom Google Reviews sections, schema markup, and Google Analytics/GTM implementation.
- Structured brand identity guidelines from clients' existing visual assets, creating documented brand catalogs for consistent use across web and marketing materials.
- Built and iterated on a Vite-based frontend theme and converted it into a WordPress theme with Elementor compatibility.

WordPress Developer Feb 2025 – Aug 2026
MBVA 24-7

- Led the migration of 3 corporate sites from Divi to Elementor Pro, achieving full mobile responsiveness and improved load times.
- Engineered a custom ROI calculator using Gravity Forms and JavaScript to boost lead conversion rates; directed AI-assisted development of a custom WordPress theme, handling all QA, integration, and customization.
- Executed technical and on-page SEO — keyword research, competitor analysis, HTML semantics, AI-assisted content improvement. Reduced unindexed blog posts from 14 to 2 via internal linking, robots.txt refinements, and custom schema (Ubersuggest, Claude Pro).
- Audited and replaced heavyweight plugins with lighter alternatives, improving GTmetrix grade from C to B; maintained security hardening across high-traffic client domains.
- Handled job postings and marketing updates across Facebook, Instagram, and LinkedIn.
- Handled DNS administration across client domains — domain transfers, record configuration, and email whitelisting — ensuring traffic and mail are routed correctly.

Project-based Frontend Developer Jan 2025 – Jul 2025
Be Epic LLC

- Developed and launched client sites using WordPress, Wix, and GoDaddy, ensuring cross-browser compatibility and brand alignment.
- Integrated AI tools for rapid content updates and handled technical troubleshooting for legacy WordPress installations.
- Managed a client's WordPress/WooCommerce store — updating content and fixing minor layout issues — and resolved an email-deliverability problem where order and inquiry notifications were failing to reach the client's Yahoo inbox.

Project-based Frontend Developer Jun 2024 – Apr 2025
Trouble Free Employees LLC

- Developed a high-fidelity, responsive master template in GoHighLevel from a handed-over design for karate-school clients, using custom HTML/CSS/JS to overcome GHL page-builder limitations, particularly around responsiveness.

- Collaborated with the developer team to replicate the master template across nearly 10 sub-accounts.
- Assigned to lead development of a cleaning-service/staffing site after the senior developer left the agency.
- Managed a client's WordPress site, creating and updating pages with handed-over content.
- Built and managed automated lead-nurture funnels in GoHighLevel with calendar-booking integrations.

Freelance WordPress Developer Oct 2023 – Dec 2023

USA Wholesale Suppliers

- Connected Elementor forms to Airtable so submissions flowed directly into the database; built additional automations across Make and Airtable to reduce manual data entry.
- Assisted in web design and developed client sites in Elementor and Wix.
- Handled job postings across Facebook and Reddit.

Junior WordPress Developer Mar 2022 – Jun 2023

Aemorph (Singapore Digital Agency)

- Improved site performance and rankings via 301 redirects to eliminate 404 errors, WebP image conversion, and internal/external linking per the SEO team's recommendations (RankMath, Yoast).
- Contributed to a 5-person team building custom WordPress themes via manual coding (HTML, CSS, JS, PHP) and Elementor.
- Promoted to lead developer after senior team members departed; led development of the CA Facilities website and a restaurant website on custom WordPress themes with Elementor and custom Elementor widgets (sliders, icons, badges/tags).
- Published blogs and built pages across Drupal, Wix, Webflow, and Magnolia.
- Bulk-uploaded and managed hundreds of products on Shopify.
- Implemented tracking via Google Analytics, Tag Manager, and Search Console.
- Performed basic image resizing and optimization in Adobe Photoshop.
